### **Sandler successful at ISO 2014 – The textile house attracts visitors**

Polyester protects from the cold and from humidity, dampens sound, is resistant to moisture and temperature-regulating. It is kind to the skin and low in emissions. Polyester is our daily companion with all of its protective properties—now even in our homes.

True to this motto, Sandler AG showcased its *fibercomfort*<sup>®</sup> insulation nonwovens made of polyester fibres on occasion of this year's ISO trade fair in Cologne, Germany. The nonwovens for „the textile home“ were in great demand with the visitors of Europe's leading trade fair for insulation and insulation materials. Approximately 90 professionals visited the Sandler booth during the 2-day fair and informed themselves about the recyclable textiles. They were given a first-hand feel and look at the nonwovens' merits with a model roof and booth walls made of printed nonwovens. Sandler nonwovens for technical insulation were equally popular with the audience. Sandler's second participation in the ISO trade fair again was a great success, with a good number of promising new contacts being established—an ideal basis for a renewed participation in the ISO 2016.
